Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Site History:	***Data prior to 2005 does not appear in GeoTracker. Consult agency file for all site data*** In July 2001, six angle borings (B1 through B6) were advanced to 30 ft bgs beneath USTs and dispensers at the Site. Analytical results showed concentrations of methyl tertiary butyl ether (MTBE), tertiary amyl methyl ether (TAME), and tertiary butyl alcohol (TBA) at maximum concentrations of 1,100 ppb, 12 ppb, and 14,000 ppb, respectively. No gasoline or other gasoline constituents were detected in any of the 36 soil samples collected. In April 2003, groundwater monitoring wells MW1, MW2, and MW3 were installed near locations of the 2001 borings showing fuel oxygenates. No soil samples were collected. The wells were screened from 10 to 45 feet. Groundwater was encountered at 25 ft bgs during boring activities, however, subsequent well gauging showed groundwater between seven and eight feet (above the well screened interval). Laboratory analytical results of groundwater samples collected indicated TPHg (71 ppb) and MTBE (3,500 ppb) in MW2 and MTBE only (110 ppb) in MW3. No gasoline or its byproducts were detected. In February 2004, five soil borings were drilled and soil vapor wells B7 and B8 and groundwater wells MW4, MW5, and MW6 were installed. B7 and B8 were drilled to 13.5 ft bgs and screened from 3.5 to 13.5 feet. Well MW4 was installed to 25 ft bgs and screened from 5 to 25 feet, well MW5 was installed to 55 ft bgs and screened from 5 to 55 feet, and well MW6 was installed to 27.5 feet and screened from 5 to 27.5 feet. In February 2005, soil borings B9 and B10 were drilled and converted to 24 groundwater monitoring wells. Well B11 was installed

a few months later in July 2005 to 24 feet. Groundwater wells B9 and B 11 were screened from 4 to 24 feet, and well B10 from 19 to 24 feet. In January 2008, three 20-foot angled soil borings were advanced (B 12, B 13, and B 14) near the USTs to confirm results from earlier investigations in that area and to further assess soils beneath the site. Soil sample analytical results from Borings B12, B13, and B14 showed concentrations of TPHg, BTEX, and MTBE at maximum concentrations of 4,000 ppb, 361 ppb, 452 ppb, 264 ppb, 1,318 ppb, and 6.0 ppb, respectively. On May 13, 2009, borings MW7 and MW10 were drilled. Soil boring MW7 was drilled to 25 ft bgs and converted to a groundwater monitoring well, screened from 5 to 25 feet. Boring MW10 was drilled deeper in an effort to locate groundwater, however, groundwater was not encountered to the total depth of 45 ft bgs in MW10. Soil analytical results of samples collected in both borings were "non-detect" for TPHg, for VOCs, and for oxygenated compounds. Concentrations of ethanol were detected only in soil sample MW7-20' at 783 ppb. Boring MW10 was properly backfilled and well MW7 was incorporated into the Site's groundwater monitoring regime. On June 20, 2009, soil borings MW8B and MW9B were advanced. Groundwater was detected in both borings at approximately 25 ft bgs. The borings were terminated at 25 ft bgs and were converted to groundwater monitoring wells, screened from 10 to 25 feet. The groundwater in MW8B and MW9B was observed to be under pressure, as previously observed in MW7, rising to shallower depths during the well installations. Soil sample analytical results from borings MW8, MW9, MW8B, and MW9B, and groundwater results from wells MW7, MW8B, and MW9B were all "nondetect" for TPHg, for ethanol, for VOCs, and for oxygenated compounds. On January 14 and 15, 2010, two soil borings were advanced to 25 bgs, (ASl/SV1 and AS2/SV2) and one boring to 60 ft bgs (MW10B). Analytical results from soil samples collected during boring activities showed low levels of gasoline and its constituents in some, but not all, of the samples from borings AS2/SV2 and MW10B. Maximum concentrations were detected at 29.97 ppm TPHg in MW10B at 40 feet, 2.0 ppb benzene in MW10B at 55 feet, and 12 ppb MTBE in AS2/SV2 at 10 feet. No chemicals were present above laboratory detection limits in soil samples from boring AS1/SV1. Two of the borings were converted to 25-foot/6-foot dual-nested air sparge/soil vapor extraction wells ASl/SV1 and AS2/SV2, and the third was converted to 57-foot groundwater monitoring well MW1 SVE pilot testing was conducted Feb. 1, 2010 using SV1, SV2, TMVWS and MW10B. Initial TPHg concentrations ranged from 847.42 to 9520.81 ppmv. Benzene ranged from <0.05 to 1.49 ppmv. End results showed VOC concentrations decreased. 15.4 lbs of TPHg were removed. The ROI inside the tank pit was ~50 . The ROI outside the pit was less than 8 . 2 groundwater extraction wells were installed July 27, 2010 to 20 in the UST pit. The wells were screened from 5-20 . Groundwater was encountered at 8 . The newly installed wells and 2 existing wells were used for a 48-hour multiphase extraction test from July 28-30, 2010. SVE started Feb. 4, 2011 and ran until January 2012. . Individual well TPHg concentrations ranged from 59.6 to 1276.17 ppmv. SVE used TMVW-N, TMVW-S, and MW10B where the concentrations were the highest. GW extraction began Feb 11, 2011, extracting from EW-1 and EW-2. Groundwater was extracted, run through a series of three 1000 lb granular activated carbon filters and discharged to the onsite sewer main. The system was discontinued in November 2011. Rebound testing was conducted in July 2011. . Results showed little to no rebound for all of the wells. Four confirmation soil borings were drilled in

October 2012. The only gasoline constituents detected were in the capillary fringe. A potential fault line divides the Site with the western boundary of the site affectinggroundwater conditions at the Site. Residual gasoline impacted shallow g.w. appears to have migrated across the fault line into the deeper water bearing zone at the SW corner of the site, however the impact is not significant. Groundwater monitoring has been ongoing at the Site since May 2003. 14 groundwater wells exist on and near the Site. Gasoline free product has been detected in well B8 (south and down gradient of the USTs) since 2005, and in two tank monitoring vadose wells at the Site (TMVW-N and TMVW-S). A free product recovery system was installed at the Site in May 2009 until May 2010. The November 2012 GW sampling event showed that all wells were below the detection limits for TPHg, BTEX, and oxygenates Sept 2013 - wells abandoned. Oct 2013 - Case closed. Site History: On September 11, 2013, one split diesel tank was removed from 12890 Day Street, Moreno Valley, CA. Soil samples were taken under the dispenser and tank with concentrations up to 1190 ppm TPHd under the tank and 880 ppm under the dispenser. Site History/Historic Release Information: A former LOP site existed at the property in a different UST location. In November 1996 a 12,000 gallon diesel UST (underground storage tank) was removed. Soil samples collected under the tank and dispenser indicated a release had occurred from the UST system. The former UST/dispenser areas were overexcavated and confirmation soil borings confirmed contaminated soil had been successfully removed. Excavated soil was successfully bioremediated at the site and used as backfill. LOP issued a site closure letter in January 1998. Current LOP Site: September 2013 One 12,000 gallon compartmentalized (10K & 2K) diesel UST was removed. The dispenser was located adjacent to the UST. A total of 12 soil samples were collected below the UST/dispenser/piping area (Soil Samples #1- #12). Soil sample concentrations at the dispenser were observed to be 370 ppm and 880 ppm TPHd at two and six feet, respectively, and samples under the tank were 1190 ppm at 2 ft and 124 ppm TPHd at 6 ft below the UST. All other soil samples collected were non-detect (ND) for BTEX, MTBE, ETBE, DIPE, TAME, TBA. The site was placed into LOP on October 1, 2013 due to increasing concentrations with depth. Assessment: October 2013 - three soil borings(B-1, B-2, B-3) were advanced in the area of the former dispenser area (B-1) and two in the vicinity of the fill end of the tank (B-2, B-3) to depths between 20 and 30 feet (ft) below grade (bg). Soil samples were analyzed for diesel-range hydrocarbons (C11-C22) using EPA Method 8015B and volatile organic compounds and oxygenates using EPA method 8260B. All samples were non-detect (ND) for all constituents tested. The stockpiled soil removed from the former dispenser area was also characterized and 12.1 ppm TPHd was detected in stockpile sample S#6. Groundwater was not encountered during the drilling to the maximum depth explored (30 ft bg). Groundwater Monitoring: Groundwater (GW) was not encountered to the depth explored (30 ft bg) at the site, therefore, GW sampling/monitoring has not been conducted and actual depth to GW below the site is not known. There are several closed UST cleanups in the vicinity of this site and the data from two of the closest sites shows the following: 1. Former Riverside International Raceway located ~1500 ft to the south: Depth to GW was 110 ft bg in 1991 and rose to 81 ft bg in 1999. GW flow was consistently to the northwest during this time period. 2. Arco 5632/Riverside Better Gas located at 6287 Day St (~1800 ft to the north): There are two GW zones including a shallow zone ~4 ft bg to 15 ft bg and deeper zone ~30 ft bg to 50 ft bg. GW flow at this location was reported to the southwest. Verification: As described above, three soil borings were advanced in October 2013 and subsurface conditions in the former UST area were found to contain minimal subsurface hydrocarbon concentrations remaining in situ. Further delineation or assessment of soil conditions is not warranted. Based on the data, it appears that TPHd detected in soil samples is limited and further assessment and/or remediation is not warranted. Subsurface Soil types: Soil

ROBERTSONS READY MIX INC (Continued) **S101590164**

beneath the site generally consists of clayey, silty sand, mostly fine to coarse grain, relatively dense to very dense. Remediation: Remediation was not conducted. Nearby Wells: Two DPH supply wells are located within + mile of the site. Land Use: All USTs have been removed from this site and were not replaced. The site was previously occupied by a commercial cement supplier and is currently being redeveloped by the City of Moreno Valley for commercial purposes. The cement supply company is no longer operating at the site and has relocated. Case closure letter issued 3/7/2014

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.
