
ELECTRIC RULE 17

UNMETERED ELECTRIC SERVICE

A. QUALIFICATIONS

If the Utility determines that a proposed electrical load connected to a service will not generate enough revenue to offset the cost of metering and the installation will be secure from current diversion, an unmetered service will be allowed. Services eligible for unmetered service include clock timer controls, sprinkler control relays and other small loads for which energy use can be easily estimated. This service is generally restricted to governmental agencies or utilities.

B. BILLING

Energy used on an unmetered service will be billed under Rate Schedule A - General Service. Street lighting and traffic controls will be billed under applicable rates.

C. ENERGY CONSUMPTION

Energy consumption for billing purposes will be established by the Utility.
